

**“A STUDY ON ORGANIZATIONAL ACTIVITIES AT
SODECIA INDIA PRIVATE LIMITED, CHENGALPATTU”**

By

**Mr. N. GOSALRAM
(Reg. No: 142224631050)**

of

**SRM VALLIAMMAI ENGINEERING COLLEGE
(An Autonomous Institution)**

AN INTERNSHIP REPORT

**Submitted to the
FACULTY OF MANAGEMENT STUDIES**

*In partial fulfilment of the requirements for the award of the
Degree of
MASTER OF BUSINESS ADMINISTRATION*

ANNA UNIVERSITY :: CHENNAI – 600 025.

NOVEMBER 2025

INTERNSHIP REPORT

SRM COLLEGE VALLIAMMAI ENGINEERING
(An Autonomous Institution)
SRM NAGAR, KATTANKULATHUR – 603 203. CHENGALPATTU
(DT).

BONAFIDE CERTIFICATE

This is to certify that this Internship Report titled “**A STUDY ON ORGANIZATIONAL ACTIVITIES AT AT SODECIA INDIA PRIVATE LIMITED, CHENGALPATTU**”, is the Bonafide work of Mr. **N. GOSALRAM**, (Reg.No:142224631050) who carried out the work under my supervision. Certified further, that to the best of my knowledge, the work reported herein does not form part of any other Internship Report on the basis of which a degree or award was conferred on an earlier occasion on this or any other candidate.

Dr. K. LATHA, Ph.D

Associate Professor
Department of Management Studies
SRM Valliammai Engineering College,
(An Autonomous Institution)
Kattankulathur.

Dr. Venkata SSR Muramalla, Ph.D

Professor & HOD,
Department of Management Studies
SRM Valliammai Engineering College,
(An Autonomous Institution)
Kattankulathur.

Submitted for Viva voce Examination held on _____ EXAMINER

DECLARATION

N. GOSALRAM, student of the Department of Management Studies, SRM Valliammai Engineering College, Kattankulathur, declare that the Internship work entitled, **“A STUDY ON ORGANIZATIONAL PERFORMANCE AT SODECIA INDIA PRIVATE LIMITED, CHENGALPATTU”** is in partial fulfilment of Master’s Degree in Business Administration. This is my original work and not submitted for award of any degree, diploma, fellowship or other similar title or prizes.

Place: Kattankulathur, Chennai

Date:

N. GOSALRAM

02nd Aug 2025

TO WHOM SO EVER IT MAY CONCERN

This is to certify that **Mr.N.GOSALRAM** Register Number **142224631050** Student of **MBA – Finance & Operations** second year from **SRM Valliammai Engineering College** , Kattankulathur had done his **Internship** at Sodecia India Pvt Ltd, HR & S Department Maintain Payroll during the period from **07th July 2025 to 02nd Aug 2025**. During the training period, his code and conduct were good.

We wish him all the best for his better Future

For Sodecia India Pvt Ltd.,

For SODECIA INDIA PVT. LTD.

Authorised Signatory

ACKNOWLEDGEMENT

It is a matter of great pleasure for me to submit this project report on “**A STUDY ON ORGANIZATIONAL PERFORMANCE AT SODECIA INDIA PRIVATE LIMITED, CHENGALPATTU**” towards the partial fulfilment for the award of MBA Degree from Anna University, Chennai. I would like to start off by thanking Almighty God for all the love, support and blessings given me all these years.

I am grateful to my institution, **SRM Valliammai Engineering College, Kattankulathur**, for providing me the facilities and inspiration that has made this project a success. I express my heartfelt thanks to **Dr. M. Murugan, M.E., Ph.D**, Principal, **SRM Valliammai Engineering College** for providing me a congenial atmosphere to work in. I thank my Head of Department, Prof. Dr. Venkata Sai Srinivasa Muralla, Ph.d, for his encouragement throughout the project development period.

I thank my Project Supervisor, **Associate Prof. Dr. K. LATHA .Ph.D** for being patient and taking out his precious time to help me in more ways than one.

It is an absolute profound sense of gratitude to express my heartfelt thanks to my External Guide **Mr. TAMIZHMANI. HR Manager, SODECIA india private Limited, Chengalpattu**, for his scholarly guidance & kind cooperation throughout the project.

I thank all the faculty and non-teaching staff of the department for being there. I thank my parents and my friends for all the motivation and blessings that they showered upon me.

N. GOSALRAM

1.INTRODUCTION

1.1 Importance of the topic.

This study is important because it helps to understand how various activities are managed and coordinated inside a real manufacturing organization like Sodecia India Pvt. Ltd. It gives a practical view of how departments such as production, finance, HR, quality, and supply chain work together to achieve business goals.

1. **Real-time Understanding:**

It helps to apply classroom knowledge to real-world business situations.

2. **Departmental Coordination:**

Shows how different departments coordinate their activities to ensure smooth operations.

3. **Decision-making Process:**

Helps to observe how business decisions are made at various levels (strategic, operational, and financial)

4. **Skill Development:**

Enhances personal skills such as communication, problem-solving, data analysis, and professional behavior.

5. **Identifying Gaps:**

The study may highlight challenges or areas where improvements can be made in the company's current practice

6. **Learning Business Culture:**

Helps understand company culture, values, leadership style, and employee roles in achieving the company's objectives.

7. **Career Relevance:**

Prepares the student for future roles in management by giving practical knowledge and building confidence

1.2 Reasons for Choosing the Company/Industry

As an MBA student specializing in Finance and Operations, I chose to pursue my internship at Sodecia India Pvt. Ltd., a reputed name in the automotive manufacturing sector, due to the company's strong presence in both operational excellence and financial management within the industry.

1. Alignment with Dual Specialization (Finance & Operations):

Sodecia operates in a highly competitive automotive industry where cost control, efficient production processes, capital investment decisions, and supply chain optimization are critical. This offers me the unique opportunity to apply both financial and operational knowledge in real-time scenarios

2. Exposure to the Automotive Manufacturing Sector:

The automotive industry is capital-intensive and highly process-driven. It presents practical challenges and solutions in areas such as working capital management, inventory control, budgeting, cost reduction, and lean manufacturing – all of which are core components of my MBA curriculum.

3. Opportunity to Understand Financial Practices in Manufacturing:

Sodecia provides exposure to the financial aspects of a manufacturing company such as cost accounting, financial planning and analysis (FP&A), project costing, and investment decisions in machinery and automation.

4. Reputed Global Company with Learning Potential:

Being a part of the Sodecia Group, a global Tier-1 automotive supplier, the Indian operations of Sodecia offer insight into both local and global financial and operational standards. This helps me understand international practices, corporate governance, and cross-border financial decision-making.

5. Hands-on Experience in Real Manufacturing Environment:

Interning at Sodecia allows me to directly observe and learn how operations and finance intersect in decision-making – from procurement planning to managing production budgets and analyzing operational costs.

6. Strong Industry Relevance and Future Opportunities:

The automotive manufacturing sector continues to evolve with growing focus on efficiency, automation, and sustainable practices. Gaining experience in this sector enhances my employability and prepares me for a future role in finance or operations within manufacturing or related industries.

1.2 Objectives of the study.

- 1.To apply theoretical knowledge from MBA studies in a real business environment.
- 2.To understand the structure, workflow, and functioning of various departments in the organization.
- 3.To observe and learn how decision-making happens in day-to-day business operations.
- 4.To gain hands-on experience with business tools, software, and reporting systems.
- 5.To analyse the challenges faced by the company and understand practical problem-solving methods.
- 6.To develop professional communication, teamwork, and analytical skills.
- 7.To study how finance and operations are managed to improve business performance.
- 8.To identify areas for improvement and provide suggestions based on observations.
- 9.To build confidence and readiness for full-time job roles after MBA.
- 10.To prepare a detailed report on internship learning and industry insights.
- 11.To understand the financial processes in a manufacturing setup such as budgeting, cost analysis, and financial reporting.
12. To observe the operational workflow including production planning, inventory management, and supply chain activities.
- 13.To analyze how financial decisions support operational efficiency.
14. To study the methods used for reducing cost and improving productivity.
- 15.To gain hands-on experience in using tools and systems used in finance and operations departments.
- 16.To understand the challenges faced in managing finance and operations in the automotive industry

2.INDUSTRY PROFILE

2.1 Major Players in the Industry.

1. Tata Motors

A leading Indian manufacturer of cars, trucks, and buses with a strong presence in both domestic and international markets.

2. Maruti Suzuki India Ltd.

India's largest car manufacturer with a wide range of popular passenger vehicles.

3. Mahindra & Mahindra Ltd.

Well-known for SUVs, tractors, and commercial vehicles, with a strong rural and export market.

4. Ashok Leyland

A key player in the commercial vehicle space, particularly trucks and buses.

5. Hyundai Motor India Ltd.

A major foreign company with strong sales in the Indian passenger car market.

6. Hero MotoCorp Ltd.

The world's largest manufacturer of two-wheelers based in India.

7. Bajaj Auto Ltd.

A leading manufacturer of motorcycles, scooters, and auto-rickshaws with a major export presence.

8. TVS Motor Company

One of the top two-wheeler manufacturers in India, known for innovation and wide product range.

9. Bosch India

A major player in auto components and technology-driven solutions for the automotive industry.

10.Sodecia Group

A global Tier-1 supplier with operations in India, including manufacturing of chassis, body, and engine components for major OEMs.

11. JBM Auto Ltd.

A leading Indian manufacturer of sheet metal components, assemblies, tools, and buses. JBM Auto is known for its strong relationship with OEMs and its diversified operations in electric vehicles and engineering services.

12. Gestamp Automoción

A global leader in the design, development, and manufacture of metal components for automobiles, especially body-in-white, chassis, and mechanisms.

13.Unipres Corporation

Specializes in precision stamping and pressing technologies, producing body and transmission parts. Supplies to major Japanese and global OEMs.

2.2Competitor analysis

Company	Headquarters	Core Products	Strengths	Market Presence
Sodecia India Pvt. Ltd.	Portugal (India operations)	Chassis components, body structures, engine parts	Global footprint, Tier-1 supplier, Lean manufacturing systems	Strong in Europe, growing in India
JBM Auto Ltd.	India	Sheet metal components, tools, bus manufacturing	Strong domestic presence, backward integration, OEM partnerships	Very strong in India, expanding globally

Gestamp Automotive	Spain	Body-in-white, chassis, mechanisms	High R&D investment, advanced forming technology	Global presence in 20+ countries
Unipres Corporation	Japan	Press-formed auto parts, transmission components	High-end precision engineering, Japanese quality standards	Strong in Asia, US, Europe
Grupo Cosmos	Spain	Automotive structural parts	Advanced welding and stamping solutions, focus on lightweighting	Strong in Europe and Latin America
Moonlight Auto Pvt. Ltd.	India	Sheet metal components, sub-assemblies	Cost-effective solutions, growing supplier base	Small-to-medium domestic presence

Nash Industries (I) Pvt. Ltd.	India	Sheet metal, fine blanking, electrical stampings	Wide range of metal forming capabilities, Tier 1/2 supplier	Strong in India, export-oriented
--------------------------------------	--------------	---	--	---

Competition Observations:

1. Technology & Innovation:

Gestamp and Unipres lead in innovation, investing heavily in R&D and automation. Sodecia is modernizing but has room to expand R&D in India.

2. Market Position:

JBM has strong OEM relationships in India. Gestamp and Unipres dominate globally. Sodecia is growing steadily in India as part of its global strategy.

3. Cost Competitiveness:

Indian companies like Moonlight and Nash offer low-cost manufacturing, which is a challenge for global players like Sodecia.

4. Global vs. Local Advantage:

Global firms bring technology; Indian firms bring cost benefits. Sodecia tries to balance both by localizing operations and maintaining global standards.

5. Product Portfolio:

Most competitors offer overlapping product lines, but JBM and Gestamp have a broader range and more integration (like JBM's entry into e-buses).

3. PROFILE COMPANY

3.1 Profile, Achievements/Milestones.

Company Profile: Sodecia India Pvt. Ltd.

Sodecia India Pvt. Ltd. is a part of the global Sodecia Group, headquartered in Portugal, which is a multinational industrial group providing full-service solutions in the automotive components sector. Sodecia specializes in the manufacturing of body-in-white components, chassis systems, engine components, and automotive assemblies. The company works closely with major global OEMs (Original Equipment Manufacturers) and Tier-1 suppliers.

Sodecia entered the Indian market to strengthen its presence in Asia and support its global supply chain network. With state-of-the-art manufacturing facilities, Sodecia India focuses on high-quality metal stamping, welding, assembly, and value-added engineering services.

Key Business Areas:

- Body-in-white (BIW) structural parts
- Chassis and suspension components
- Engine brackets and mounts
- Welding and robotic assembly
- Tooling and prototyping
- Tier-1 supplier services to automotive OEMs

Locations in India:

Sodecia operates plants and offices in key automotive hubs such as Chennai and Pune, which are close to major vehicle manufacturing clusters.

Clientele Includes:

- Tata Motors
- Mahindra & Mahindra
- Ford
- Renault-Nissan
- Hyundai
- Other global OEMs and Tier-1 suppliers

Achievements and Milestones of Sodecia India Pvt. Ltd.

1. Part of a Global Automotive Giant:

Sodecia India is a subsidiary of the Portugal-based Sodecia Group, which operates in over **40 locations across 3 continents** – Europe, North America, South America, and Asia.

2. Successful Integration into Indian Market:

Since entering India, the company has successfully set up manufacturing plants and built a strong client base among India's leading OEMs.

3. World-Class Manufacturing Standards:

Sodecia India has achieved global standards in production quality, including **ISO/TS 16949** and **IATF 16949** certifications, showcasing its commitment to quality and process excellence.

4. Advanced Automation and Robotics:

The company has invested in modern technologies like **robotic welding, automated stamping lines**, and **CNC machines**, improving production efficiency and product consistency.

5. Sustainable Practices:

Focused on eco-friendly manufacturing processes, waste reduction, and safety standards, aligning with global sustainability goals.

6. Employee Development & Training:

Sodecia places importance on continuous employee training and development, with regular programs in lean manufacturing, quality control, and safety.

7. Strategic Expansion in Asia:

India serves as a strategic location for Sodecia's expansion in the Asian automotive market, supporting clients across the APAC region.

3.2 Organization Chart

3.3 Overview of Functional Departments.

I. Operations department

1. Production

- Oversees the manufacturing of automotive parts such as chassis and body structures.
 - Ensures efficient use of machinery, manpower, and materials.
 - Focuses on production planning, scheduling, and output monitoring.
 - Implements lean manufacturing, 5S, and continuous improvement techniques.
 - Works to reduce cycle time, defects, and downtime.
-

2. Material planning

- Prepares material requirement plans based on the production schedule and sales forecast.
 - Coordinates with procurement to raise purchase orders for raw materials and bought-out parts.
 - Maintains optimal inventory levels to avoid overstocking or material shortages.
 - Uses tools like MRP (Material Requirements Planning) and ERP systems.
 - Follows up with suppliers for timely delivery of materials.
 - Supports cost control by avoiding urgent purchases and excess inventory.
-

3. Logistics

- Manages inbound logistics (receipt of raw materials and components).
 - outbound logistics (movement of finished goods to customers).
 - Coordinates with transporters, warehouses, and suppliers for vehicle movement.
 - Ensures timely transportation and compliance with documentation like invoices, e-way bills, etc.
 - Tracks shipments using logistics software or GPS-based tracking systems.
 - Works to reduce freight cost, transit time, and damages during transportation.
-

4. Dispatch

- Prepares finished goods for dispatch based on customer orders.
- Ensures proper packaging, labeling, and documentation.
- Coordinates loading activities and vehicle arrangement.
- Prepares dispatch documents such as delivery challans, invoices, packing lists, and e-way bills.
- Maintains records of deliveries and communicates dispatch status to customers and internal teams.

- Ensures that goods are dispatched without delay and in good condition.
-

5. Maintenance

- Reduces machine downtime, which saves production time and cost.
 - Improves safety by ensuring machines operate within safe limits.
 - Extends the lifespan of machinery through proper care.
 - Supports lean manufacturing by reducing waste from unplanned stoppages.
 - Ensures uninterrupted production, helping the company meet customer delivery timelines.
-

II. Information Technology Department

- Manages company's IT infrastructure including servers, networking, and security.
 - Supports ERP systems used for production planning, finance, and logistics.
 - Ensures data security, software updates, and IT helpdesk support.
 - Automates key business functions to improve efficiency.
-

III. Finance Department

- Manages budgeting, accounting, and financial reporting.
 - Tracks expenses, revenue, and cash flow.
 - Handles taxation, audits, and statutory compliance.
 - Supports cost control, investment decisions, and financial analysis.
 - Coordinates with banks, vendors, and customers on payment processes.
-

IV. HR & Safety Department

1. Human Resource

- Handles recruitment, onboarding, and manpower planning.
- Manages payroll, employee records, and statutory compliance.
- Organizes training programs for skill development and safety awareness.
- Promotes employee engagement, performance appraisals, and grievance handling.
- Ensures a productive and positive work environment.

2. Safety

- Ensures workplace safety by enforcing safety rules and procedures.
- Conducts regular safety audits, drills, and risk assessments.
- Provides safety training to employees and contract workers.
- Maintains safety equipment like fire extinguishers, PPE kits, and alarms.

- Works to achieve a zero-accident work culture.
-

V. Quality Department

- Ensures that all products meet customer specifications and industry standards.
 - Conducts inspections, audits, and testing at various stages of production.
 - Implements quality control tools like SPC, FMEA, and root cause analysis.
 - Handles customer complaints and corrective actions.
 - Promotes continuous improvement through QMS (Quality Management System).
-

4.OBSERVATIONS AND FINDINGS

4.1 OBSERVATION

Steps to Receive an Order at Sodecia India Pvt. Ltd.

Sodecia India Pvt. Ltd. follows a structured and cross-functional approach to receiving and confirming customer orders. The steps are as follows:

1. Customer Requirement Received

- The customer sends their product requirement (such as drawings, quantity, quality specifications, and delivery timelines).
 - This can come via email, customer portals, or direct communication.
-

3. Initial Review by IT and Sales Team

- The **IT team** and **sales team** coordinate to understand the technical details of the order.
 - IT may check compatibility with ERP systems and ensure data exchange processes (e.g., EDI) are ready.
-

4. Cost Evaluation by Finance Department

- The **finance team** evaluates the cost of raw materials, labor, overheads, and other expenses.
 - They prepare a **cost sheet** and analyze whether the order is financially viable and profitable.
 - Based on cost analysis, they decide the price quote to be offered to the customer.
-

5. Feasibility Check by Operations Team

- The **operations team** checks the **capacity** of machines, manpower, tools, and materials.
 - They evaluate whether the required quantity can be produced within the customer's time frame.
 - They also check if any changes in tooling, process, or layout are required.
-

6. Cross-Functional Discussion

- All relevant departments (IT, Sales, Finance, Operations, Planning, Quality) hold a meeting or discussion.
 - They evaluate the order based on:
 - Technical feasibility
 - Production capacity
 - Financial viability
 - Quality and delivery requirements
-

7. Order Confirmation to Customer

- If everything is acceptable, the sales or commercial team sends a confirmation to the customer.
 - Terms and conditions (cost, delivery, payment) are agreed upon.
 - An official **Purchase Order (PO)** or **Release Schedule** is received from the customer.
-

I. Operations departments

1. Structured Production Flow:

- The production line is organized in a logical sequence, starting from raw material input to final assembly and inspection.
- Workflow is smooth, minimizing unnecessary movement and delays.

2. Use of Automation and Robotics:

- Robotic welding and automatic stamping machines are used for precision and speed.
- This reduces human error and increases production capacity.

3. Work Instructions and SOPs:

- Every workstation has clear Standard Operating Procedures (SOPs) displayed.
- Operators follow visual aids and checklists to ensure quality and consistency.

4. Shift-Based Operation:

- Production runs in multiple shifts (day/night) to meet customer demand.
- Proper shift handover documentation is maintained.

5. Daily Production Targets:

- Daily and hourly production targets are set and monitored.
- Boards display actual vs target output for performance tracking.

6. Quality Checkpoints:

- Inline quality checks are done at each stage.
- Final inspection is done before dispatch to ensure zero-defect delivery.

7. Machine Maintenance Integration:

- Production operators are trained for autonomous maintenance (basic cleaning and checks).
- Any issues are reported to the maintenance department immediately.

8. Safety Compliance:

- Safety equipment like gloves, goggles, helmets, and signage are used.
- Emergency stop buttons and alarms are installed near machines.

9. Waste Reduction:

- The company uses lean tools like 5S and Kaizen to reduce material waste and idle time.
- Scrap parts are sorted and analyzed for root causes.

10. Employee Skill Utilization:

- Operators are trained in multiple tasks to increase flexibility.
- Cross-training improves productivity and reduces downtime.

a) Production

i. Stamping Process :

To shape sheet metal into desired components using high-pressure dies and presses.

Stamping Machine capacity in sodecia india pvt ltd

LINES	LPS A	LPS B	HPS A	TOTAL
Machines				
630 tones	-	-	1	1
600 tones	-	-	1	1
300 tones	-	-	6	6
250 tones	1	-	-	1
200 tones	16	3	-	19
160 tones	1	-	-	1
150 tones	3	4	-	7
110 tones	2	10	-	12

Total no of stamping machines in sodecia is = **48**

ii. **Painting Process:**

- To protect metal parts from corrosion and enhance durability and appearance.
- Stamped parts are cleaned using chemical pre-treatment or shot blasting
- Parts go through a **painting booth** or **powder coating** chamber.
- After parts are goes to the next operations

The sodecia india pvt ltd is not paint every part of our own production some parts are given paint order to other companies also.

The list of companies is getting painting orders from sodecia india pvt ltd.

1.sharda motor industries limited

Plot No. 12 Mahindra World City,
Chengalpattu Taluk Kanchipuram Dist, 1st Avenue,
Chengalpattu - 603002, Tamil Nadu, India

2.metal bond enterprises

No. C- 41, Sidco Industrial Estate,
Maraimalai Nagar, Chennai,
Tamil Naduorders

☐ this companies are getting painting orders from sodecia india pvt ltd.

iii. **Welding process:**

To join different metal components into assemblies using heat or pressure.

Types and capacity of welding in sodecia india pvt ltd

Types	Description	Number of machines
Manual Welding	Manual welding is performed by skilled operators using handheld welding equipment.	2
Robotic Welding	Automated robotic arms are programmed to perform repetitive welding tasks with high precision and speed.	1

Spot Welding	A resistance welding process where metal surfaces are joined by applying pressure and heat from electric current at a single point.	5
Projection Welding	A form of resistance welding where raised projections on one part focus the welding current at contact points.	8
Burring (Pre-Welding Process)	Burring is the process of creating raised edges or slight deformation on metal surfaces before joining.	1
Drilling (Support Process)	Drilling is used to make precise holes in metal sheets or components either before or after welding.	1

b) Material planning

i. Demand Forecasting:

- Customer schedules and forecasts are received weekly/monthly.
- The planning team estimates raw material needs based on production targets and customer orders.

ii. ERP System Usage:

- SAP or ERP software is used to track inventory levels, plan materials, and raise purchase orders.
- Real-time data helps avoid overstocking or understocking.

iii. Bill of Materials (BOM):

- Accurate BOM is maintained for every product to ensure correct material calculation.
- Any changes in product design are quickly updated in the BOM.

iv. Supplier Coordination:

- Material planners coordinate with local and international suppliers.
- Lead times, transportation delays, and supplier capacity are regularly monitored.

v. Just-In-Time (JIT) Approach:

- Wherever possible, materials are ordered on a JIT basis to reduce storage costs.
- Inventory is minimized without affecting production flow.

vi. Buffer Stock & Safety Stock:

- Critical items have defined safety stock levels to handle emergencies or delays.
- Planners continuously review reorder points.

vii. Material Reconciliation:

- Monthly reconciliation is done to match actual vs planned material consumption.
- Variance analysis is performed to identify waste or process deviations.

viii. Daily Review Meetings:

- Cross-functional meetings are held with production, stores, and procurement teams to review stock status.
 - Shortages or urgent requirements are discussed and prioritized.
-

c) Logistics

i. Inbound Logistics (Raw Material):

- Raw materials from suppliers are received based on production requirements.
- Materials are checked for quality and quantity at the receiving bay.
- ERP systems are used to record incoming inventory and update stock levels.

ii. Storage and Handling:

- Raw materials and components are stored in a well-organized warehouse.
- FIFO (First-In, First-Out) method is followed for material usage.
- Materials are tagged and scanned using barcode systems for easy tracking.

iii. Material Movement:

- Internal material movement from store to production is managed with proper documentation.
- Forklifts and material handling equipment are used for efficient transfer.

iv. Outbound Logistics (Finished Goods):

- Finished goods are packed, labeled, and moved to the dispatch area.
- Proper documentation (invoice, delivery note) is prepared before shipment.
- Dispatch schedules are based on customer orders and timelines.

v. Transportation:

- Vehicles are scheduled for dispatch as per customer location and delivery time.
- GPS tracking is used for monitoring vehicle movement and delivery status.

vi. Coordination:

- Continuous coordination with the production, planning, and dispatch departments ensures on-time delivery.
- Any issues like delays or part shortages are escalated and resolved quickly.

vii. Safety and Compliance:

- Safety protocols are followed during loading/unloading.
- Proper PPE is used by staff.
- Material handling follows company safety and environmental guidelines.

viii. Data Recording & Monitoring:

- Logistics KPIs like delivery timelines, transport cost, and damage rate are tracked regularly.
 - ERP systems help maintain transparency and real-time updates.
-

d) Dispatch

i. Final Quality Check Before Dispatch:

- a. All finished goods are inspected before dispatch.
- b. Quality team ensures no defective parts are sent to the customer.

ii. Packing Process:

- c. Products are packed as per customer specifications.
- d. Special care is taken for delicate parts (with foam, plastic wrap, etc.).
- e. Barcodes and labels are attached for easy identification.

iii. Storage in Dispatch Area:

- f. Separate area is allocated for storing goods ready for dispatch.
- g. FIFO method is followed to maintain proper order.
- h. Inventory is tracked through ERP.

iv. Dispatch Planning and Scheduling:

- i. Based on customer delivery schedule, the dispatch team plans shipment.
- j. Routes and delivery vehicles are arranged accordingly.
- k. Delivery challans, invoices, and e-way bills are prepared.

v. Vehicle Loading:

- l. Goods are loaded carefully using forklifts or manually, depending on product type.
- m. Loading is done in sequence to match unloading at the customer site.

vi. Transport & Delivery Coordination:

- n. Transporters are informed in advance to avoid delays.
- o. GPS tracking is used in many cases to monitor vehicle movement.
- p. Delivery confirmation is received once the goods reach the customer.

vii. Document Management:

- q. All dispatch records (invoice, gate pass, customer PO copy) are filed.
- r. ERP system updates stock reduction in real-time.

viii. Customer Feedback:

- s. If there is a delivery delay or quality issue, it is recorded and reported.
- t. Feedback is analyzed for improving dispatch and packing.

2. Maintenance

1. Preventive Maintenance (PM):

- Regular maintenance schedules are followed for each machine.
- Maintenance tasks like lubrication, filter cleaning, and tightening bolts are done weekly or monthly.
- PM checklists are displayed near machines.

2. 🚨 Breakdown Maintenance:

- In case of sudden machine failures, the maintenance team responds immediately.
- Root cause analysis is done to avoid repeat breakdowns.
- Spare parts are kept in stock for quick replacement.

3. 🧠 Skilled Technicians:

- The department has skilled electrical and mechanical technicians.
- Technicians are trained in troubleshooting CNC, press machines, robots, and welding equipment.

4. 📅 Maintenance Planning:

- Maintenance schedules are prepared monthly.
- Downtime is planned during non-peak hours to avoid affecting production.

5. 📊 Data Recording and Tracking:

- Machine history is maintained in logbooks and ERP systems.
- Downtime data, frequency of breakdowns, and spares used are tracked for performance analysis.

6. 🛒 Spare Parts Management:

- Critical spare parts are stocked in a dedicated tool room.
- Spare issue and return are recorded with part numbers and usage history.

7. 🧯 Safety Practices:

- Maintenance team follows safety rules like lockout–tagout (LOTO) procedures before working on machines.
- PPE like gloves, helmets, and safety shoes are compulsory.

II. INFORMATION TECHNOLOGY

1. Network and Internet Management:

- The IT team maintains **LAN/Wi-Fi connectivity** throughout the plant and offices.
- Ensures uninterrupted internet access for all departments.

2. ERP System Management:

- ERP software is used for tracking **inventory, production, dispatch, and finance**.
- IT team provides training and support to employees using ERP modules.
- Real-time data helps in better planning and decision-making.

3. Email & Communication Systems:

- Official emails are managed and monitored by IT.
- Supports video conferencing, internal communication tools (like Microsoft Teams).

4. Data Security:

- Anti-virus, firewalls, and backups are managed to protect company data.
- Regular system updates and software licensing are maintained.

5. Customer Order System Support:

- IT team supports **online customer portal** access for sharing purchase orders and invoices.
- Also helps in coordinating with the finance and operations teams during customer discussions.

6. Hardware & System Support:

- Responsible for **computer installation, printer maintenance, barcode scanners, and system repair**.
- Timely response to system issues reported by departments.

7. Support in Data Reporting:

- Helps departments create **automated reports, dashboards, and Excel tools**.
- Supports data analysis using IT tools.

8. Integration Across Departments:

- IT department plays a central role in connecting departments through shared software and systems. Helps ensure **smooth digital flow of information**.

III. Finance

1. **Budgeting and Planning:**

- The department prepares monthly and yearly budgets for operations, salaries, raw materials, and capital expenses.
- Budget approvals are aligned with management targets.

2. **Costing and Quotation:**

- Product cost is calculated based on raw materials, labor, overhead, and machine cost.
- The finance team works with operations to give accurate quotations to customers.

3. **Purchase and Payment Handling:**

- The finance team handles vendor payments and maintains records of purchase orders.
- Payments are processed as per terms agreed with suppliers.

4. **Customer Billing and Receivables:**

- Responsible for creating invoices and tracking customer payments.
- Maintains accounts receivable aging reports to follow up on pending dues.

5. **Financial Reporting:**

- Prepares monthly and annual financial statements like:
 - Profit and Loss Account
 - Balance Sheet
 - Cash Flow Statement
- Reports are submitted to top management and auditors.

6. **Audit and Compliance:**

- Handles internal and external audits.
- Ensures GST, TDS, and income tax filings are done on time.
- Maintains compliance with Indian accounting standards and laws.

7. **Payroll and Employee Reimbursements:**

- Manages monthly salary payments, PF, ESI, and bonuses.
- Handles travel and conveyance reimbursements for employees.

8. **ERP and Data Accuracy:**

- All financial transactions are recorded in the ERP system. Ensures real-time and error-free financial data entry.
-

IV. HR & SAFETY

Human resource:

1. Recruitment and Hiring:

- The HR team manages the hiring of workers, engineers, and staff.
- Sources include job portals, campus drives, and referrals.
- Selection process involves interviews, skill tests, and approvals from department heads.

2. Training and Development:

- Induction training is provided for new employees.
- On-the-job training is given in departments like production, maintenance, and quality.
- Safety training is conducted regularly for shop floor workers.

3. Payroll and Salary Management:

- Monthly salary processing is handled by HR in coordination with the finance team.
- Overtime, leaves, bonuses, and deductions are managed using HR software.

4. Policy Implementation:

- HR implements company rules regarding working hours, dress code, leaves, and discipline.
- Employee handbook is provided to all staff.

5. Attendance and Leave Management:

- Biometric attendance system is used.
- Leave records (CL, SL, EL) are maintained digitally.
- Late coming and absenteeism are tracked and reported.

6. Employee Welfare and Engagement:

- Facilities like canteen, transport, uniforms, and health check-ups are managed by HR.
- Celebrations like festivals, birthdays, and safety week are organized to boost employee morale.

7. 📋 **Statutory Compliance:**

- Ensures compliance with labor laws like ESI, PF, Factory Act, Gratuity Act, etc.
- Maintains all employee records and government reports.

8. 🚨 **Grievance Handling and Disciplinary Action:**

- HR acts as a link between employees and management.
 - Handles complaints, disputes, and takes proper action as per company policy.
-

• **Safety:**

1. 🧑‍🔧 **Personal Protective Equipment (PPE):**

- All employees and visitors are required to wear PPE:
 - Helmets
 - Safety shoes
 - Gloves
 - Goggles
 - Ear plugs in noisy areas

2. 🚧 **Safety Sign Boards and Markings:**

- Clear safety instructions, emergency exits, and hazard signs are displayed across the factory.
- Floor markings are used for movement of forklifts and pedestrians.

3. 🚨 **Emergency Preparedness:**

- Fire extinguishers, fire alarms, and emergency stop buttons are installed.
- First-aid kits and trained safety staff are available.
- Emergency drills (fire and evacuation) are conducted regularly.

4. 🔥 **Fire and Electrical Safety:**

- Fire extinguishers are inspected monthly.
- Electrical panels are locked and marked with danger signs.
- Wires and switches are maintained properly to prevent short circuits.

5. ⚙️ **Machine and Equipment Safety:**

- Machines have safety guards, sensors, and emergency stop features.
- Only trained staff are allowed to operate heavy machines.

- Lockout–Tagout (LOTO) is used during machine maintenance.

6. **Clean and Safe Work Environment (5S):**

- Workplace is kept clean and organized using 5S principles.
- Tools are arranged neatly, and waste is disposed of properly.

7. **Training and Awareness:**

- Safety training is conducted for all workers regularly.
- New workers receive induction on safety practices.
- Posters and banners promote awareness about workplace safety.

8. **Chemical and Material Handling:**

- Proper storage of oils, chemicals, and paints is maintained.
 - Safety Data Sheets (SDS) are available for hazardous materials.
-

v. Quality

i. **Incoming Material Inspection:**

- All raw materials (like metal sheets, bolts, etc.) are checked for:
 - Size
 - Grade
 - Surface condition
- Quality team ensures material matches the specifications from suppliers.

ii. **In-Process Quality Check:**

- During stamping, welding, and painting, regular checks are done to control defects.
- Parameters like thickness, welding strength, and paint finish are verified.
- Uses tools like calipers, gauges, and jigs.

iii. **Final Product Inspection:**

- Every part is visually and dimensionally checked before packaging.
- Inspection includes:
 - Weld strength

- Burrs
- Rust
- Paint quality
- Non-conforming parts are sent to rework or scrap.

iv. **Documentation & Traceability:**

- Every batch has a quality report.
- Barcodes or tags are used for tracking part history.
- Inspection reports are stored for audit and reference.

v. **Quality Training & Awareness:**

- Workers receive training on quality standards and how to identify defects.
- Quality alerts are displayed on notice boards near production lines.

vi. **Feedback and Corrective Action:**

- If defects are found by the customer, the team investigates and submits a root cause analysis.
- Corrective actions are taken to avoid future defects.

vii. **Certifications:**

- The company follows standards like IATF 16949, ISO 9001, etc.
- Quality audits (internal & external) are conducted regularly.

viii. **Quality Metrics Monitored:**

- Rejection rate
 - Rework rate
 - First-pass yield
 - Customer complaints
-

4.2 Study Findings

I. **Operations:.**

- Operations are well-planned with a focus on timely production.
 - Use of automation in welding and stamping improves accuracy.
 - The shop floor is maintained with 5S principles.
 - Operations team coordinates with planning, maintenance, and dispatch regularly.
-

i. **Production Department:**

- Production includes stamping, welding, burring, drilling, and painting.
 - Both manual and robotic welding are used depending on part complexity.
 - Quality checks are integrated during the process.
 - Production efficiency is monitored through daily reports.
-

ii. **Dispatch Department:**

- Final products are stored properly and dispatched based on customer schedules.
 - FIFO (First In First Out) method is used in inventory.
 - Trucks are arranged as per delivery plan.
 - Proper documents like invoices and challans are maintained.
-

iii. **Logistics Department:**

- Manages inbound (raw material) and outbound (finished goods) flow.
 - Coordinates with vendors and dispatch for timely delivery.
 - Uses JIT method to reduce inventory and space.
 - Scrap materials are handled efficiently using conveyor and truck loading.
-

iv. **Maintenance Department:**

- Regular preventive and breakdown maintenance of machines.
 - Records of service history and spare parts inventory are maintained.
 - Quick response to machine breakdown ensures no major production loss.
 - Works closely with production and safety teams.
-

II. Information technology

- Supports ERP systems and data security.
 - Helps in order processing, production planning, and inventory tracking.
 - Maintains hardware and software for smooth communication.
 - Plays a role in digitalizing internal reports and records.
-

III. Finance :

- Handles budgeting, cost control, payroll, and vendor payments.
- Coordinates with sales and operations to ensure pricing and cost efficiency.
- Prepares financial statements and manages tax compliance.
- Works on cost estimation for customer orders.

Legal Files :

- Pf monthly contribution
- ESI monthly contribution
- Pf monthly contribution (contractors)
- ESI monthly contribution(contractors)

Thus all files are maintained by finance department

Credit policy :

The credit policy is based on the customers the sodecia india pvt ltd is offers to the customer to credit sales some customers are get 45 days credit period And some customers are get 60 days credit in materials.

Receivables management :

the company has give a reminder to the customers to every week through emails and phone calls

payments :

all the payments are made by only finance department other departments are give a purchase order or quotation the finanace department is only made a payments to the customer, employees,vendors and etc

IV. HR & Safety

Human Resource :

- Handles recruitment, training, attendance, and employee welfare.

- Regular safety and skill training sessions are conducted.
- HR uses biometric systems for attendance and software for payroll.
- Staff engagement activities improve morale and retention.
- They are maintained by personnel management and legal files of the company

Legal Files :

- Factory act -annual return ,
- Factory act - half yearly return,
- Factory act -holiday list
- Overtime renewal of exemption
- Factory working time declaration
- Register of adult workers
- Register of wages
- Suspension register
- Property tax
- Panchayat union licence
- And exatre

this all legal files are maintained by human resource management of the company in sodecia india pvt ltd.

Security Guard:

Security guards are deployed at all entry and exit points, working in shifts to ensure full-time monitoring.

Registers maintains by security guard :

- Interview
- Visitors
- Canteen
- On duty
- Late
- Housekeeping
- Vehicle
- Inward
- Outward

Seals are maintained by security guard

- Inward
- Outward
- Round seal (official)
- Quality

- Department seal

Housekeeping:

The factory and office areas are kept clean with daily cleaning routines.

Canteen :

- The company provides a clean and functional canteen for its employees and staff.
- Both veg and non-veg meals are available based on the day's menu.

Safety:

- Safety PPE like gloves, shoes, helmets are mandatory.
- Safety boards and emergency exits are clearly marked.
- Fire extinguishers, emergency alarms, and drills are in place.
- Safety training and accident prevention measures are effective

Legal files

- ambulance FC
- fire general licence
- LPG licence
- Diesel storage
- Air & water content to expention
- Hazardous waste authorization
- And extra

This all are legal files are maintained by safety department in sodecia india pvt ltd

Basic safety rules of the sodecia india pvt ltd

General Safety Rules :

- Do not operate machinery or perform a job without proper training and authorization.
- Work with concentration, avoid horseplay, and don't visit other workstations unnecessarily.
- If you are unsure about a task, stop working and ask your supervisor for clarification before continuing.
- When two people are working on the same machine or workstation, they should communicate to prevent accidents.
- The use of designated personal protective equipment (PPE) is mandatory.
- Safety goggles are required when using compressed air.
- Never use compressed air to clean your clothes or body.

- Do not keep waste or tools near rotating machine parts, and do not wear loose clothing that could get caught.
- Do not use damaged PPE or tools; always use the correct tools for the job.
- Report accidents, near misses, unsafe conditions, and equipment or property damage to your supervisor.
- Always use the pedestrian track.
- Do not operate forklifts without a license and authorization.
- Do not operate machinery or equipment without proper safeguards and protection.
- Never open an electrical panel without authorization and a license.
- If you find an electrical or mechanical problem, stop working, inform your supervisor, and ask for qualified personnel to handle it.
- Only handle chemicals if you have been properly trained and are using the correct PPE.
- Before performing maintenance or cleaning, disconnect power supplies and indicate that the machine should not be connected (Lock-out/Tag-out).
- Do not operate a machine after maintenance without authorized permission. Use proper techniques for lifting and handling materials; do not carry heavy loads by hand. Use material handling equipment for heavy loads and proper gloves for materials with sharp edges.
- Never block emergency exits or equipment like fire extinguishers.
- It is forbidden to wear loose long hair and accessories like chains, necklaces, watches, or bracelets while working on machines.
- Do not use your phone while operating machines or performing operations.
- Place all waste in a dust bin.
- Keep your workplace clean and organized (5S).
- If you detect a fire, inform others and press the fire alarm. When you hear the alarm, stop your machine and go to the assembly area.
- People under the influence of alcohol are not allowed in the factory.
- Smoking is not permitted inside the factory.
- All safety rules must be followed to ensure the safety of yourself and your colleagues.

Machine Safety Rules :

- Before starting a machine, check that all sensors are working correctly.
- Always use safety guards when working with machinery.
- Ensure the "Double-Hand operation button" and the "Emergency Stop button" are in good working condition.

- Check that all electrical connections on the machine are in good condition.
- Before operating, check for any oil leaks in and around the machinery.
- During operation, observe the machine for any abnormal noise or vibration and inform your Shift Supervisor immediately if you find any.
- Do not over-stack raw materials or parts on the work table or pallet.
- Follow the daily machine checklist at the start of your shift.
- Do not load double jobs on the die or tool.
- Only operate machinery with supervisor guidance.
- If you notice a deviation in the tool or damage to the machinery, do not operate it and inform your supervisor immediately.

This all rules are give by the company to the employees through safety department in company

V. Quality

- Strict quality control at each production stage.
- Use of instruments and checklists for inspection.
- Focus on reducing rejection and rework rates.
- Maintains proper documentation for traceability and audits.

The quality department is ensuring the all the production of the company they are check a all the products are produced by with in the norms and quality The all report are store by the quality departments.

Every machine and all parts are having a guidance and norms. the July month the sodecia is produce 140 types automobile components in company each an all parts are had an own norm. it all are maintained by quality department.

VI. Customers of sodecia india pvt ltd

- 1. Unipress**
 - 2. Renault**
 - 3. Braks india**
 - 4. Nissan**
 - 5. Ford**
-

VII. Vendors of sodecia india pvt ltd

Steel:

- 1. Posco india processing center pvt ltd**
- 2. Steel shoppe india pvt ltd**
- 3. Pos Hyundai steel mfg**
- 4. Special wire**
- 5. Thyssen group**

Hardware :

- 1. Fastenex pvt ltd**
- 2. Unipress**
- 3. Ellar metal**
- 4. Raini industries**
- 5. Nitco**
- 6. Fontana**
- 7. PB fasteners**
- 8. Tormeltas**

Packing :

- 1. National office mart**
- 2. Mercury packaging**
- 3. Kcl packing**
- 4. Jeno**

Chemicals:

- 1. VMR agencies**
- 2. Ramsakar**

FIFO labels

1.dhanalakshimi printers

VIII.Lean Manufacturing:

1. 5S Implementation:

- Sort, Set in order, Shine, Standardize, Sustain are followed on the shop floor.
- Workstations are clean, organized, and labeled.
- Improves workplace efficiency and reduces time spent searching for tools or parts.

2. 🕒 **Takt Time Monitoring:**

- Production lines are balanced based on customer demand.
- Helps in avoiding overproduction or delays.
- Ensures optimal use of manpower and machinery.

3. 🚫 **Waste Elimination (Muda):**

- Focus on reducing 7 types of waste:
 - Overproduction
 - Waiting
 - Transport
 - Over-processing
 - Inventory
 - Motion
 - Defects
- Tools and layouts are designed to minimize these wastes.

4. 🛠️ **Kaizen (Continuous Improvement):**

- Employees are encouraged to suggest small improvements regularly.
- Daily team meetings discuss issues and ideas for process improvements.
- Boosts employee engagement and quality.

5. 📋 **Standard Work Procedures:**

- SOPs are documented for every machine and operation.
- Reduces variation in product quality and increases consistency.
- Helps in training new operators faster.

6. 🛠️ **Preventive Maintenance (TPM):**

- Machines are maintained regularly to avoid breakdowns.
- Maintenance schedules are displayed on the shop floor.
- Increases equipment uptime and reduces unexpected stoppages.

7. 📊 **Visual Management:**

- Boards, charts, and status indicators are used to show production targets, defects, downtime, etc.

- Provides real-time visibility of performance and issues.

8. Kanban System:

- Kanban cards or bins are used to manage inventory and material flow.
 - Prevents overstocking or stockouts.
 - Ensures smooth supply to production lines.
-

IX. Scrap Handling Process:

1. Generation of Scrap:

- Scrap is mainly generated from **sheet metal stamping, trimming, and defective parts** during manufacturing.
- It is collected at each workstation immediately after production.

2. Conveyor System for Scrap Movement:

- A **conveyor system** is installed on the shop floor that directly transports scrap from the production area to the scrap yard or truck loading point.
- This reduces manual handling, improves speed, and maintains a clean environment.

3. Use of Bins and Trolleys:

- Scrap is first dropped into **metal bins** that are placed near machines.
- These bins are connected to the conveyor or moved to the conveyor loading point.

4. Just-In-Time (JIT) Principle:

- Scrap is **not stored for long periods** in the shop floor or warehouse.
- As soon as the scrap bins are full, they are **immediately transported and loaded directly into the truck**.
- This reduces space usage and avoids inventory pile-up.

5. Truck Loading and Disposal:

- Trucks for scrap collection arrive as per **pre-defined schedules** (daily or shift-wise).
- The conveyor feeds the scrap directly into the truck with **minimal human effort**.
- Scrap is then sent to authorized recyclers or scrap dealers.

Benefits Observed:

- Reduced floor space usage due to JIT handling.
 - Improved cleanliness and safety on the shop floor.
 - Time-saving and reduced manpower due to conveyor automation.
 - Streamlined disposal process aligned with lean manufacturing.
-

4.3 Personal Contributions At Workplace

1. Security Monitoring Support

- Assisted in tracking visitor entries and maintaining gate pass records.
- Helped ensure employee ID verification was properly followed.
- Participated in checking logs during shift changes to improve safety.

2. Canteen Observation & Support

- Collected employee feedback on food quality and hygiene.
- Helped maintain records of daily meal distribution.
- Supported cleanliness inspection of dining and kitchen areas.

3. Payroll System Support

- Observed how the payroll system is managed through HR and finance coordination.
- Assisted in verifying attendance reports for monthly salary processing.
- Learned the basics of salary structure, deductions, and statutory compliance (PF, ESI).

4. Mock Drill Participation

- Participated in safety mock drills organized by the EHS (Environment, Health & Safety) team.
 - Helped with awareness communication regarding emergency exits and evacuation points.
 - Observed the emergency preparedness process and reported improvement suggestions
-

5.SUMMARY & CONCLUSION

5.1 summary

The MBA internship at Sodecia India Pvt. Ltd., a leading automotive component manufacturing company, provided valuable practical exposure to real-time industrial practices. The internship mainly focused on Finance and Operations, but also included learning about other departments like Production, Quality, Logistics, Maintenance, HR, IT, Dispatch, and Safety.

During the internship, I observed how different departments coordinate and function together to meet customer requirements. The company follows structured systems such as Lean Manufacturing, Just-In-Time (JIT), 5S, and ISO/IATF quality standards to maintain efficiency, safety, and customer satisfaction.

Key areas such as order processing, material planning, cost estimation, production flow, quality inspection, and financial planning were studied in detail. The internship helped in understanding how theoretical knowledge is applied in actual business environments.

5.2 conclusion

internship at Sodecia India Pvt. Ltd. was a great learning experience. It helped bridge the gap between classroom learning and industry practice. I gained valuable insights into the working of a manufacturing company, especially in the areas of **operations, finance, and inter-departmental coordination**.

The exposure to live processes, problem-solving approaches, and the importance of teamwork and time management has enhanced my professional skills. It also gave me a clear understanding of how different departments contribute to the overall success of the organization The.

This internship has not only improved my technical knowledge but also prepared me for future job roles with greater confidence and clarity.
